DETAILED ACTION

Drawings

Figure 13 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 5, 6, and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Chocholek et al (US Patent 3,279,218).

A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535

F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88

USPQ 478, 481 (CCPA 1951).

Chockolek discloses a telescopic shaft in which a male shaft (26) and a female shaft (20) are fitted to each other non-rotatably and slidably, wherein at least one set of torque transmission members (16) are disposed in at least one set of intermediate fitting portions formed on the outer surface of the male shaft (22) and the inner surface of the female shaft (28), a stopper plate (46, 48) for regulating movement of the torque transmission members with respect to the axial direction is provided at the vicinity of an end portion of the male shaft.

Regarding claim 2, the intermediate fitting portions comprise grooves, the grooves of the male shaft have a surface that is substantially perpendicular to the axial direction and in contact with the at least one set of torque transmission members (see fig 3).

Regarding claims 3 and 6, the stopper plate comprises an elastic member (46) capable of applying axial preload, and a pair of flat plates (48) to hold the elastic member therebetween.

Regarding claims 5 and 8, the stopper plate comprises a flat plate (48) and fixing means (24) for fixing the flat plate at a desired position with respect to the axial direction on the male shaft.

Claim Rejections - 35 USC § 103

Claims 4 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chockolek as applied to claims 1 and 2 above, further in view of Budaker et al (US Patent 6,035,740).

Chocholek does not disclose the stopper plate being affixed to a small diameter portion of the male shaft.

Budaker teaches a stop (15) affixed to a small diameter portion of the male shaft (fig 1) for the purpose of limiting axial travel (col 2, line 51).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Chocholek and affix the stopper plate to the male shaft at a small diameter portion of the male shaft for the desired purpose of limiting axial travel as taught by Budaker.
